

the hiring experience platform

our story

Kyle Connors
CEO

- Prev CTO/VP Engineering
- Scaled SaaS > \$500M exit as CX eng lead
- Hired 50+ people

Chris Connors
CRO

- Closed largest deal in Yext's history
- Top sales performer & Yext & Google

we power the hiring experience for these world-class companies

there's a growing labor shortage

85 million

unfilled jobs expected by 2030

employers have a new type of candidate to compete for

40%

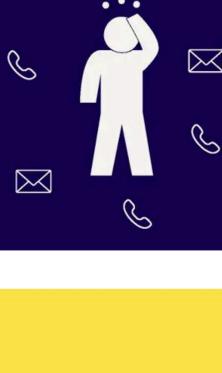

more likely to accept with a positive experience

but are burdened by a manual process

- Sharing Information**
Employers waste countless hours creating, maintaining, and sending content to candidates
- Collecting Feedback**
Employers have little insight into what is working and not working with < 20% response rates
- Providing Transparency**
Employers spend countless hours communicating back and forth with candidates on where they stand

with existing tools not designed for the candidate

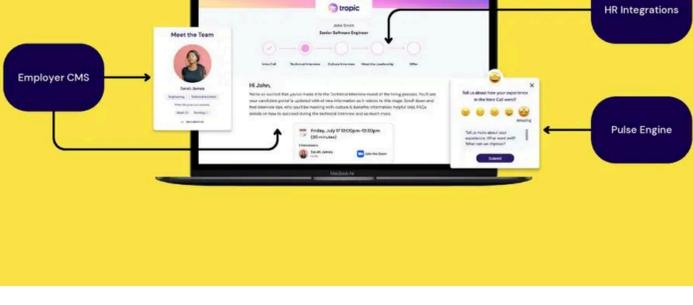

we've built an entirely new layer

- Candidate portal**
We're the home base for candidate for their entire journey
- Rapid 1-click integrations**
We provide 1-click integrations into over 40+ existing tools for rapid go-lives
- SaaS Offering**
We're a SaaS based product and sold directly to employers

here's how it works

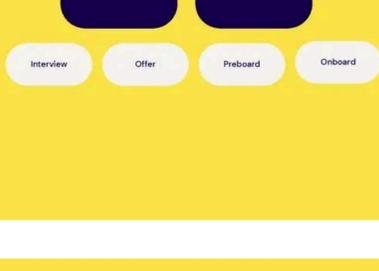

we help companies efficiently win & keep talent

- Increased engagement & experience**
Candidates become more engaged with employers than ever before
- Higher offer acceptance & retention**
Candidates are more likely to accept offers & stay at companies
- With increased efficiency**
With candidate.fyi, hiring teams have less operational overhead

we are owning a new, intelligent layer

- Unlocking new value**
By owning the engagement touchpoint + integrating with multiple systems of record, we impact key drivers like quality of hire + early stage attrition
- Intelligence creates moat**
With each candidate that passes through our system, we get smarter and create higher lock-in
- Selling opportunities**
As we move deeper into the onramp, we drive up ACVs via engagement modules

we can build, sell, & scale
